HOW TO CLEAN THE KEY PARTS OF YOUR BREWER AFTER EACH CYCLE/CUSTOMER INTERACTION

1. Spray the sanitizer (non-abrasive disinfectant) on a cotton linen to clean the screen
   **Never spray directly on the screen**

2. Before cleaning:
   - If you have a Carrousel Menu, pull on the line on top of the screen to freeze the images
     (you’ll be able to go back to regular screen after)
   - If you have the matrix menu; press and hold the screen with one finger where there is no
     beverage selection while cleaning the display
     ▪ Once that step completed, remove your finger to clean this area

3. Wipe the screen starting from the top downwards

4. The screen can also be wiped using cleaning wipes: the front of the screen is glass, so it is very
   resistant to all kinds of chemicals. Therefore, you may use any non-abrasive disinfectant
   recommended by your local health authorities on the glass part only of the screen.

CLEANING THE FRONT DOOR OF THE BREWER

• Every hour, perform an outside cleaning of the front door (plastic), the cover and the drip tray
• Only use soft soap and water to clean the exterior plastic components
• Use a different cotton linen to clean the outside of the brewer

EMPTYING THE WASTE BIN

• Wash your hands before manipulating
• Carefully pull the waste bin, throw the coffee grounds in the garbage, then reinstall the bin
• Wash your hands and the brewer with soft soap and water

For a safer usage, please think of using your stylus soft tips, the eraser tip of a pencil, and think in
advance of your choice of beverage to minimize the point of contact with the screen.

*Corrosive products or the prolonged exposure to soap may affect the finish and integrity of plastics and painted
surfaces. It is recommended to test the products and procedure prior to general use.
**KDP is not qualified to comment on the effectiveness of specific disinfectants against specific germs.
