COVID-19: Briefing materials

Global health and crisis response

Updated: April 13, 2020
COVID-19 is, first and foremost, a global humanitarian challenge.

Thousands of health professionals are heroically battling the virus, putting their own lives at risk. Governments and industry are working together to understand and address the challenge, support victims and their families and communities, and search for treatments and a vaccine.

Companies around the world need to act promptly.

This document is meant to help senior leaders understand the COVID-19 situation and how it may unfold, and take steps to protect their employees, customers, supply chains, and financial results.

Read more on McKinsey.com
Executive summary

The situation now

At the time of writing, COVID-19 cases have exceeded 1.5 million and are increasing quickly around the world, with concerns that a 15% hospitalization rate could drive hospital system overload.

To reduce growth in cases, governments have moved to stricter social distancing, with “shelter in place” orders in many areas in the U.S., Europe, India, and other countries. This has driven rapid demand declines and fears of recessions, which governments are trying to meet through bailouts and other fiscal measures.

Some Asian countries, e.g. China, have kept incremental cases low, and are restarting economies. So far, there is little evidence of a resurgence in infections, though reinfection from abroad is being reported.

How the situation may evolve

There is a limited window for governments to drive adequate public-health responses and meet demand drawdowns with proportionate economic interventions. Without this, the possibility of a deeper effect on lives and livelihoods is more likely.

Scaled-up testing will soon clarify the extent and distribution of spread in the U.S., and Europe. There continues to be concern about the extent of spread and its consequences in countries with large populations and higher population densities.

Learnings from other countries and recent innovations (strict social distancing rules, drive through testing, off-the-shelf drugs that can address mild cases, telemedicine enabled home care) could provide basis for a restart.

Actions that institutions can take

Having invested in setting up a basic structure to drive basic Resolve and Resilience planning, public and private sector institutions around the world are engaged in continuing protection of people (incl. workforce and customers), stabilizing supply chain (esp. PPE), as well as ensuring adequate cash and liquidity on hand.

In addition to this focus, some governments and companies are also starting to shift focus to what a Return to work may look like.

An effective Return depends on a number of factors – from ensuring that the local region has adequate readiness for a restart from a public health standpoint, to estimating timing for a return of demand, and other factors.

Ensuring that the Nerve Center, has adequate strategic focus in the form of Plan Ahead team, continues to be an important organizing principle for many institutions.
The global spread is accelerating with more reports of local transmission

Latest as of April 12, 2020

Impact to date

- >1.91M Reported confirmed cases
- >119,500 Deaths
- >212 Countries or territories with reported cases
- >180 Countries or territories with evidence of local transmission
- 70 Countries or territories with more than 1000 reported cases
- ~0.1% China share of new reported cases April 7 – April 13
- ~38% US share of new reported cases April 7 – April 13
- ~46% Europe share of new reported cases April 7 – April 13
- 3 New countries or territories with cases April 7 – April 13

Sources: World Health Organization, John Hopkins University (Observed at 2100 ET), CDC, news reports

1. Previously counted only countries; now aligned with WHO reports to include territories and dependencies; excluding cruise ship
2. Previously noted as community transmission in McKinsey documents; now aligned with WHO definition
The virus has spread worldwide despite containment efforts

Current as of April 13, 2020

Source: World Health Organization, Johns Hopkins University, McKinsey analysis
The greatest share of cases come from Europe and the U.S.

Cumulative number of cases since March 1st – April 13th
Thousands

Asia
Incremental cases for China and South Korea are now <100 per day with continued focus on disease surveillance and management of imported cases and localized transmission

Europe
The effects of lockdowns policies are beginning to show across multiple countries. While the absolute number of new cases remains high, daily totals have plateaued or are declining in a number of countries

United States
The U.S. consistently has the highest number of new cases in the world, but there is early evidence of plateauing in new infections – each of the first 12 days in April has seen between 25K and 35K new cases

1. U.S. data from Johns Hopkins University CSSE (Observed at 2100ET); all other data from WHO Situation Reports

Sources: WHO situation reports, Johns Hopkins University, press search
Countries begin with similar trajectories but curves diverge based on demographics and measures taken

U.S. data from Johns Hopkins University CSSE; all other data from WHO Situation Reports

Sources: WHO situation reports; Johns Hopkins University, press search

Select country detail

- **Europe**: Multiple European countries (including Italy, Spain, Germany) have seen their curves bend downward as the rate of new infections plateaus or declines.

- **South Korea**: Aggressive testing, contact tracing and surveillance, and mandatory quarantines are helping isolate virus clusters and dramatically slow spread of outbreak.

- **United States**: Steepest rate of growth but the curve has bent over the last 10 days.
Countries with the widest testing tend to have the fewest cases per 1,000 people

3 Archetypes of testing approaches

1. **Countries with limited testing**
   - Low volumes of testing lead to few confirmed positive cases

2. **Countries with moderate testing approach**
   - Some countries test only (or predominantly) those with significant symptoms. Since milder cases are more likely to be missed, the Case Fatality Rate appears higher

3. **Countries with broad testing approach**
   - Countries that have taken broad testing strategies tend to be those that have had success in limiting the number of new cases

---

1. Number of deaths / confirmed cases
2. Significantly more testing recently occurred

State of the Science: Latest evidence on COVID-19

A  How is COVID-19 transmitted, and how long can it persist in different settings?

We are learning more over time about how long the virus remains in the air and about survival on surfaces

According to one study\(^1\), droplets can hang in the air for 0.5-3 hours

Durability on surfaces ranges from hours to days, with the virus surviving for longer on harder, less porous surfaces

More work is needed to understand the impact of these findings on transmission

B  What portion of patients are asymptomatic, and what is the fatality rate?

WHO and the US CDC estimate that between 20-50% of all infected individuals are asymptomatic

The same sources project a case fatality ratio (CFR) of all infected individuals of 1.4-5.7%

C  What therapies and vaccines are in development for COVID-19?

To date, there is no approved specific therapy or vaccine available for COVID-19. There are over 130 therapeutic candidates and 80 vaccine candidates\(^2\) being considered across a range of modalities and use cases.

Among therapeutics, some small molecules are repurposed from other indications (e.g. antivirals, antimalarials); some showed efficacy in isolated cases\(^3\) under compassionate use

D  Do masks help reduce transmission of COVID-19?

Surgical masks catch both large and small droplets (coughed, sneezed, or exhaled by an infected individual)

Several countries have recommended public use of masks to various extents (e.g., fines in Vietnam for not using masks, Japan delivering cloth masks to each household)

D. At scale use of masks can have a role in reducing transmission of COVID-19, as reflected in recent policy changes

Surgical face masks can prevent transmission of coronaviruses

There are two main modes of coronavirus transmission…

Spread through contact and large droplets, such as from a cough or sneeze

Spread through small droplets diffusing through the air over both short and long distances

…and surgical masks can catch both large and small droplets¹ as it’s coughed, sneezed, or exhaled

Many governments are facilitating the use of face masks, but with divergent approaches

South Korea²
Government banned export of medical masks; mandated 50% of mask production to be directed to centralized governmental supply
Government started rationing medical grade masks
Government published guidelines on re-using medical grade masks

Vietnam⁴
Banned export of face masks
Wearing mask is required in public places
Imposed hefty fines for going ‘mask-less’

Japan³
It is a standard practice in Japan to wear masks in public while healthy
Japanese government plans to deliver 2 cloth masks per household

United States⁵
CDC initially recommended against general public wearing masks
CDC updated its guideline, recommending wearing cloths masks (but is not recommending the use of surgical masks)
Some state/local governments implemented compulsory mask wearing (e.g., LA)

However, cloth masks may not be effective against airborne aerosols

⁵. CDC

Current as of April 13, 2020
Countries will decide which measures to implement based on local situations and disease progression

Lead indicators to identify which phase of disease progression is applicable

- **I. Localized clusters**
  - Majority of cases can be linked to known chains of transmission (i.e., cases can be managed individually)
  - **Magnitude:** Handful of new cases per day
  - **Growth:** Percentage growth may be high, but absolute number of cases remains within the capacity of public health systems

- **II. Uncontrolled acceleration**
  - Majority of cases involve an unknown source of infection and infection rate is accelerating
  - **Magnitude:** Significant number of new cases per day
  - **Growth:** Exponential to fast linear growth in the number of new cases

- **III. Spread deceleration**
  - Number of new cases has peaked, and infection rate is decreasing
  - **Magnitude:** Significant number of new cases per day
  - **Growth:** Decline in the number of new cases over time (with potential day-to-day variation)

- **IV. Control**
  - Limited number of new cases, and systems in place to control spread of infection (e.g., track and manage cases individually)
  - **Magnitude:** Handful of new cases per day, with no significant spikes
  - **Growth:** Cases flat / trending down over time

Likely interventions

- A. Physical distancing / quarantine
- B. Travel restriction
- C. Effective use of Personal Protective Equipment
- D. Testing and tracing
- E. Healthcare capacity surge

Majority of cases involve an unknown source of infection and infection rate is accelerating

| A: Physical distancing / quarantine | High population density and communal living hinders physical dancing   | **Quarantine early and aggressively**  
Vietnam. Proactive and early- quarantine measures to isolate and confine COVID-19 infection (2/13 Lockdown of Vinh Phuc province)  
Columbia. Rapid national-wide lockdown measures (first in Latin America) |
|                                   | High percentage of vulnerable population (migrants)                      |                                                   |
| B: Travel restriction             | Lengthened domestic travel restriction can be especially costly for countries dependent on primary and secondary industry Access to goods may be harder in developing countries | **Aggressive border control**  
Vietnam. Suspension of international arrivals including ex-pat Vietnam nationals while providing case-by-case exceptions to key industry stakeholders (e.g., Samsung Electronics)  
India. Suspension of all international commercial passenger flights (3/22)  
Columbia. Aggressive border closure (13 days post first case) |
| C: Effective Use of PPE           | Cost of medical-grade PPE is burdensome Communication of PPE importance may be lagging in developing countries Hygienic practices (e.g., washing with clean water) can be difficult especially in rural areas | **Raise COVID-19 awareness**  
Vietnam. Media running frequent messaging on COVID including PPE usage; Hefty fines for sharing “fake news” about COVID-19  
Facilitate mask-wearing behavior  
Vietnam. Wearing mask is required; hefty fines for going maskless  
India. Proactive export ban on surgical masks (1/31); Government recommends home-made cloths masks |
| D: Testing and tracing            | Large-scale commercial testing is often out of reach in developing countries especially in rural areas Lower digital technology penetration (e.g., smartphones) hinders app-based tracing methods | **Supplement with low-cost/high-volume testing**  
Bangladesh. Approved the production of low-cost antibody detection test kits  
Vietnam. Imported 200,000 lower-cost rapid test kits to complement RT-PCR based tests  
Leverage previous pandemic infrastructure  
Nigeria. Using capabilities built during Ebola crisis (e.g., National Reference Laboratory for molecular testing, Emergency Operations Center) to track and isolate second-hand contacts of infected individual  
Colombia. Using capabilities built during Measles outbreak to conduct initial contact tracings |

The Imperative of our Time

1

Safeguard our lives
1a. Suppress the virus as fast as possible
1b. Expand treatment and testing capacity
1c. Find “cures”; treatment, drugs, vaccines

2

Safeguard our livelihoods
2a. Support people and businesses affected by lockdowns
2b. Prepare to get back to work safely when the virus abates
2c. Prepare to scale the recovery away from a -8 to -13% trough

“Timeboxing” the Virus and the Economic Shock

Source: McKinsey analysis, in partnership with Oxford Economics
Scenarios for the economic impact of the COVID-19 crisis

GDP impact of COVID-19 spread, public health response, and economic policies

**Virus spread and public health response**

**Effective response, but (regional) virus resurgence**
Public health response initially succeeds but measures are not sufficient to prevent viral resurgence so social distancing continues (regionally) for several months

**Broad failure of public health interventions**
Public health response fails to control the spread of the virus for an extended period of time (e.g., until vaccines are available)

**Ineffective interventions**
Self-reinforcing recession dynamics kick-in; widespread bankruptcies and credit defaults; potential banking crisis

**Partially effective interventions**
Policy responses partially offset economic damage; banking crisis is avoided; recovery levels muted

**Highly effective interventions**
Strong policy responses prevent structural damage; recovery to pre-crisis fundamentals and momentum

**Knock-on effects and economic policy response**
Speed and strength of recovery depends on whether policy moves can mitigate self-reinforcing recessionary dynamics (e.g., corporate defaults, credit crunch)

**Current as of April 13, 2020**

Scenario A3
Scenario A1

Source: Historical Statistics of the United States Vol 3, Bureau of economic analysis; McKinsey team analysis, in partnership with Oxford Economics
Scenario A3: Virus Contained

The virus continues to spread across the Middle East, Europe and the U.S. until mid Q2, when virus seasonality combined with a stronger public health response drives case load reduction.

Epidemiological scenario

China and East Asian countries continue their current recovery and control the virus by early Q2 2020

Virus in Europe and the United States would be controlled effectively with between two to three months of economic shutdown; new case counts peak by end April and declines by June with stronger public health response and seasonality of virus.

Economic impacts

China will undergo a sharp but brief slowdown and relatively quickly rebound to pre-crisis levels of activity. China’s annual GDP growth for 2020 would end up roughly flat.

In Europe and the U.S., monetary and fiscal policy would mitigate some of the economic damage with some delays in transmission, so that a strong rebound could begin after the virus was contained at the end of Q2 2020.

Most countries are expected to experience sharp GDP declines in Q2, which would be unprecedented in the post WWII era.

1. Seasonally adjusted by Oxford Economics

Source: McKinsey analysis, in partnership with Oxford Economics
Scenario A1: Muted World Recovery

The virus spreads globally without a seasonal decline. Health systems are overwhelmed in many countries, especially the poorest, with large-scale human and economic impact.

Epidemiological scenario

China would need to clamp down on regional recurrences of the virus.

The United States and Europe would fail to contain the virus within one quarter and be forced to implement some form of physical distancing and quarantines throughout the summer.

Economic impacts

China would recover more slowly and would also be hurt by falling exports to the rest of the world. Its economy could face a potentially unprecedented contraction.

The United States and Europe would face a GDP decline of 35 to 40 percent at an annualized rate in Q2, with major economies in Europe registering similar performance. Economic policy would fail to prevent a huge spike in unemployment and business closures, creating a far slower recovery even after the virus is contained.

Most countries would take more than two years to recover to pre-virus levels of GDP.

Source: McKinsey analysis, in partnership with Oxford Economics
What business leaders should look for in coming weeks

There are three questions business leaders are asking, and a small number of indicators that can give clues

**Depth of disruption**
How deep are the demand reductions?

- Time to implement social distancing after community transmission confirmed
- Number of cases – absolute (expect surge as testing expands)
- Geographic distribution of cases relative to economic contribution

**Length of disruption**
How long could the disruption last?

- Rate of change of cases
- Evidence of virus seasonality
- Test count per million people
- % of cases treated at home
- % utilization of hospital beds (overstretched system recovers slower)
- Availability of therapies
- Case fatality ratio vs. other countries

**Shape of recovery**
What shape could recovery take?

- Effective integration of public health measures with economic activity (e.g. rapid testing as pre-requisite for flying)
- Potential for different disease characteristics over time (e.g. mutation, reinfection)

**Epidemiological**

- Bounce-back in economic activity in countries that were exposed early in pandemic
- Early private and public sector actions during the pandemic to ensure economic restart

**Economic**

- Cuts in spending on durable goods (e.g., cars, appliances)
- Extent of behavior shift (e.g., restaurant spend, gym activity)
- Extent of travel reduction (% flight cancellations, travel bans)
- Late payments/credit defaults
- Stock market & volatility indexes
- Purchasing managers index
- Initial claims for unemployment
01 COVID-19: The situation now
02 Scenarios and path forward
03 Planning and managing COVID-19 responses
04 Sector-specific impact
Leaders need to think and act across 5 horizons

<table>
<thead>
<tr>
<th></th>
<th>Resolve</th>
<th>Resilience</th>
<th>Return</th>
<th>Reimagination</th>
<th>Reform</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Address the immediate challenges that COVID-19 represents to the institution’s workforce, customers, technology, and business partners</td>
<td>Address near-term cash management challenges, and broader resiliency issues during virus-related shutdowns and economic knock-on effects</td>
<td>Create a detailed plan to return the business back to scale quickly, as the virus evolves and knock on effects become clearer</td>
<td>Re-imagine the “next normal”—what a discontinuous shift looks like, and implications for how the institution should reinvent</td>
<td>Be clear about how the regulatory and competitive environment in your industry may shift</td>
</tr>
</tbody>
</table>

**Nerve center**

Managing across the 5Rs requires a new architecture based on a team-of-teams approach.
Create a detailed plan to return the business back to scale quickly
There are 3 distinct actors with different responsibilities in the Return from COVID 19

National governments
- Contain the domestic virus spread
- Fast track testing, treatment and vaccine approval and production
- Protect and restart the economy

State / Local governments
- Administer virus treatment
- Enforce protection policies
- Safeguard vulnerable populations

Companies
- Resume sustainable operations
- Protect employees in the workplace

National governments, State and Local governments, and companies each play different roles in achieving a full Return - and stakeholders in different geographies can coordinate to define roles and responsibilities.
The extent of the healthcare system’s ability to handle virus transmission is one key indicator for a national government’s readiness for reactivation.

Each region’s readiness can be assessed along two dimensions:

- **Virus spread**
  - Low
  - Medium
  - High

- **Public-health system readiness**
  - Low
  - Medium
  - High

<table>
<thead>
<tr>
<th>Virus spread</th>
<th>Low system readiness and low virus spread</th>
<th>Medium system readiness and medium virus spread</th>
<th>High system readiness and high virus spread</th>
</tr>
</thead>
<tbody>
<tr>
<td>Public-health system readiness</td>
<td>Low</td>
<td>Medium</td>
<td>High</td>
</tr>
</tbody>
</table>

### Virus spread
- **New daily infections**
- **Virus transmission rate (Rt)**, i.e. the number of people that catch the disease from a single infected person
- **New people requiring hospitalization and ICU care daily**

### Public-health system readiness
- **Medical capacity**, especially ICUs (e.g., ICU beds, ECMOs)
- **Adequate medical resources** (e.g., trained doctors, beds, personal protective equipment)
- **Ability to rapidly test infections**
- **Effectiveness in tracking and isolating cases and contacts**, including digital tools for real-time sharing of critical data

Source: McKinsey analysis, Press search
Governments could prioritize reopening of sectors based on risks of virus transmission and their economic relevance

An illustration of how countries might prioritize reopening of sectors along two dimensions

**Illustrative Example**

**Economic relevance**

- **High**
  - Sector 1
  - Sector 2
  - Sector 4
  - Sector 5
  - Sector 9
  - Sector 12
- **Low**
  - Sector 3
  - Sector 6
  - Sector 7
  - Sector 8
  - Sector 10
  - Sector 11

**Risk of transmission**

- **High**
  - Sector 1
  - Sector 2
  - Sector 4
  - Sector 5
  - Sector 9
  - Sector 12
- **Low**
  - Sector 3
  - Sector 6
  - Sector 7
  - Sector 8
  - Sector 10
  - Sector 11

**Essential services and sectors that continue operating regardless of the severity of transmission risk**

- Healthcare and services relating to prevention and control of outbreak (e.g., testing)
- Essential goods (e.g., food, medicine)
- Other essential services (e.g., utilities, waste management, public defense)

**Group 1: Examples of sectors with high economic relevance and low risk of transmission**

- Agriculture
- Manufacturing
- Logistics

**Group 2: Examples of sectors with some economic relevance and low or medium risk of transmission**

- Real Estate
- Other professional services (e.g., accounting, marketing)

**Group 3: Examples of sectors with low economic relevance and high risk of transmission**

- Food and accommodation (e.g., hotels, restaurants)
- Educational institutions
- Recreational businesses (e.g., Gyms and fitness centers)

## China example: Containment measures can be adapted based on assessed readiness for reactivation

Example of stages of reactivation China’s regions went through

<table>
<thead>
<tr>
<th>Geography</th>
<th>Stage 1</th>
<th>Stage 2</th>
<th>Stage 3</th>
<th>Stage 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hubei</td>
<td>No restrictions, but remote working is recommended and households must ensure they follow health and safety measures</td>
<td>Each household to keep only one entrance and exit point open. Allowed limited number of entrances and exits per day</td>
<td>Curfew in place with nighttime outdoor access prohibited; each household is allowed limited numbers of entrances and exits</td>
<td>Mandatory to stay home in isolation with outdoor access prohibited</td>
</tr>
<tr>
<td>Other provinces</td>
<td>No restrictions, but remote working is recommended and households must ensure they follow health and safety measures</td>
<td>Limited restrictions but highly encourage residents to work from home across multiple provinces</td>
<td>Curfew in place with certain restrictions on time of day, day of week, and other limitations that differ by province</td>
<td>Most provinces shut down with residents required to stay at home</td>
</tr>
<tr>
<td>Essential sectors</td>
<td>All sectors are allowed to operate and key supply chains operate on market basis</td>
<td>Government begins to prepare the management of key supply chains in partnership with the private sector</td>
<td>Government partially manages essential supply chains</td>
<td>Government ensures management of essential supply chains and infrastructure (i.e. medical supplies, building of temporary hospitals)</td>
</tr>
<tr>
<td>Non-essential sectors</td>
<td>All sectors are allowed to operate while being cautious of health and safety measures</td>
<td>Most sectors are allowed to operate but must comply with specific physical distancing and health protocols (e.g., in restaurants)</td>
<td>Few sectors are allowed to operate after they have received approval and comply with physical distancing and safety protocols (e.g., manufacturing factories)</td>
<td>Issued order to shutdown all non-essential companies, where only those that can operate online are allowed</td>
</tr>
<tr>
<td>Transport</td>
<td>Lockdown lifted, all transportation resumes in all Hubei cities including Wuhan. Residents who travel have to show “green” health code. People from other provinces can travel in and out of Hubei with green code</td>
<td>Easing of inter-province movement with Hubei. Transportation in Hubei cities apart from Wuhan resume. Residents must show &quot;green code&quot; and strict screening continues</td>
<td>Removed all traffic control points except for exits of Hubei province and at entrances/exits to Wuhan city. Hubei residents who travel within the province have to show &quot;green code&quot;</td>
<td>Locked down transport in and out of Hubei province, amongst cities in Hubei and within all Hubei cities including Wuhan</td>
</tr>
<tr>
<td>Other provinces</td>
<td>All transportation within city, inter-city and inter-province resumes. People who travel have to show &quot;green code&quot;</td>
<td>Inter-province movement restricted</td>
<td>Limited inter-city movements with strict screening at traffic control points</td>
<td>Intra-city movement restricted</td>
</tr>
<tr>
<td>Assembly</td>
<td>Large events and gatherings that draw crowds are banned (e.g., concerts, tourist events)</td>
<td>Gathering limited to medium-sized groups. Workplace events encouraged to be cancelled or postponed.</td>
<td>Gatherings limited to small groups in private and public places</td>
<td>Remain within circle of household members in residential spaces</td>
</tr>
</tbody>
</table>

Source: Press search
China example: Targeted demand and supply interventions can accelerate the recovery of sectors
Examples of interventions used by the Chinese government

**Demand: Restore consumer confidence**
- Boost consumers' willingness to spend:
  - Rolled out digital coupons via Alipay and WeChat pay to use for dining, shopping and travel for short period of time
  - Reduce import tariffs on consumer goods
- Communicate frequently across multiple channels
  - Establish centralized reporting and communication channels to keep citizens informed
  - Created an online epidemic control website to publish disease indicators and provide real-time updates
  - Create health QR codes on leading platform Alipay to track mobility, and alert on risks

**Supply: Accelerate business recovery**
- Guarantee transportation logistics and coordinate supply channels:
  - Coordinate local raw material and accessory resources, and promote cross-city collaboration as needed
- Assist enterprises in epidemic prevention:
  - Advised companies to formulate prevention and control measures (employee inspections, facilities, adequate medical supplies)
  - Investigation and research teams sent by central government to inspect work resumption progress
- Promulgate trade emergency measures:
  - Registration fees exempted for specific drugs and medical devices
  - Manufacturers of essential supplies and products will benefit from a one-time tax deduction for equipment purchases
  - Import/export of technology by local companies is to be prioritized and receive special assistance from local departments
- Solve labor shortage and difficulties in work resumption and recruiting:
  - Arranged chartered transport and offered allowances to bring migrant workers from provinces with labour surplus to needed cities
  - Subsidise “point-to-point” pickup and drop off of migrant workers
  - Offer subsidies for couples returning to work and companies hiring more workers
  - Receive money for every new hire by local firm and hiring a minimum of workers from outside provinces
- Alleviate pressure on cash flow and operating costs:
  - Tax declaration extension
  - Exemption of social insurance payments and housing provident funds for corporates
  - Reduce electricity cost
  - Subsidise loans, issue low cost loans, postpone loan repayment, reduce SSC, VAT reduction or exemption, and reduce rent for SMEs
China example:
Sectors recover at different rates, with large industrial firms recovering the earliest and SMEs and services taking longer

### 99%
Work resumption rate for large enterprises outside Hubei as of March 28

### 92%
Work resumption rate for all government-owned firms as of early March

### 77%
Work resumption rate for small and medium enterprises outside Hubei as of March 29

#### Industrial enterprises
- 99% of China's major industrial enterprises have resumed production as of March 28
- In Hubei, 95% of major industrial enterprises have resumed operations, and 70% of employees have returned.

#### Textile, machinery, light industries
- 70-90% of employees have resumed work as of March 28

#### Construction & infrastructure
- 11,000 key projects outside of Hubei province have resumed, at a rate of 89.1% as of March 23
- Major highway and water transportation work has resumption rate of 97%. Airport and major water projects respectively reported a rate of 87% & 86%

#### Automotive
- Returned to 97% operating rate, 82% of employees have returned to work as of March 28

#### Steel & electronics
- 90% of employees have returned to work as of March 28

#### Restaurants
- Estimated 40% of restaurants reopened and only 20% of workers returned as of mid-March

Source: Press releases
China example: Continued, targeted stimulus can support populations & businesses that struggle during reactivation periods

Examples of economic measures to support the most vulnerable segments in China

**Efforts and measures to help unemployed and impoverished people**

- Wanning city government in Hainan created 1,327 temporary public welfare posts for epidemic prevention, including disinfecting and guarding for impoverished people
- In addition to offering jobs for low-income families, many places in China arranged shuttle buses, trains and flights to transport impoverished workers from their rural hometowns back to work in big cities
- Local governments sought and dispatched workers, majority of whom were rural migrant workers in poverty, to fill vacancies of enterprises that were facing shortages of labour
- In the city of Huai'an in northern Jiangsu, the local government has announced measures including the introduction of jobs and employment subsidies to encourage migrants to work in their hometown

**Financial aid provided to highly impacted SMEs and micro-businesses**

- Offer subsidized loans to agricultural firms and SMEs
- Postponement of principal and interest loan repayment for payments from Jan 25 to June 30 2020
- From March 1 to May 31, 2020, small taxpayers in Hubei province will be exempted from VAT if their tax rate is set at 3%. Small taxpayers in other regions will pay rate of 1% on taxable sales revenue if their VAT rate is set at 3%.
- Reduce and postpone social security contributions, reduce contributions for endowment insurance, unemployment insurance and work injury insurance
- Guide banks to issue low cost loans to individual businesses
- Trim electricity charges by 5% for companies not from high energy consuming industries
- Encourage local governments to cut land use tax as incentives for property owners to reduce rent for business tenants

**COVID-19 poses a grim market for new graduates**

- College graduates in China reaches a record high of 8.74 million while job recruitment has dwindled or been postponed due to the COVID-19 outbreak
- The Ministry of Education has announced measures to ease the pressure, including launching an online campus recruitment service and expanding the enrolment of master's degree students
- To provide more job opportunities, the country will expand recruitment in basic education, primary-level medical care and community services
- Government encouragement of new graduates to work in grass-root institutions in remote areas of the country

Interventions can be categorized by effectiveness and level of pain, with 5 fundamental interventions identified.

### The Fundamentals
*Execute at scale*

1. Protection of essential health workers
2. Systematic testing
3. Contact tracing
4. Time limited quarantine of infected patients
5. Targeted use of masks

### Close to no-regret
*Operate through pandemic, maintain readiness*

6. Sign and symptom screens (temperature checks, self-screening)
7. Personal/home hygiene
8. Voluntary physical distancing
9. Migrate to remote working where possible
10. Workplace safety measures
11. Stop large gatherings
12. Cleaning/protocols of mass transportation
13. Require education safeguards

### Most painful, highly effective
*Drive compliance*

14. Full shelter-in-place
15. Restricting movement in/out of state/city
16. Mass transportation shutdown

### Effective, but painful
*Apply only as needed; mitigate risk/downside*

17. Time limited quarantine of those in contact with infected patient
18. Extended quarantine of high-risk population
19. Prohibiting selective activity/sectors (e.g., retail, manufacturing)
20. Stop small gatherings (e.g., church, sports)
21. Shift primary education to remote
22. Shift secondary education to remote
23. Shift higher education to remote

**Evidence of effectiveness**

- **Strongest evidence of high efficacy**
- **Some evidence of effectiveness**
- **Low/medium**
- **Higher**

**Level of pain, economically, socially**

COVID-19 exacerbates challenges across a variety of universal basic needs (1/2)

Potential COVID-19 related challenges

<table>
<thead>
<tr>
<th>Health-related basic need</th>
<th>Employment</th>
<th>Housing</th>
<th>Food security</th>
<th>Transportation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Economic downturn threatening small businesses</td>
<td>Ability to quarantine compromised by living arrangements (e.g., shelters, group homes)</td>
<td>Destabilization of food safety net as a result of illness and physical distancing policies (e.g., school closures, staff shortage at food agencies)</td>
<td>Public transportation systems reducing frequency of routes</td>
<td></td>
</tr>
<tr>
<td>Spike in unemployment due to businesses closing as a result of physical distancing</td>
<td>Increase in housing insecurity due to inability to pay rent</td>
<td>Rise in food insecurity due to loss of income from layoffs and reduced hours</td>
<td>Ride-share options reduced with physical distancing</td>
<td></td>
</tr>
</tbody>
</table>

## COVID-19 exacerbates challenges across a variety of universal basic needs (2/2)

<table>
<thead>
<tr>
<th>Health-related basic need</th>
<th>Social support</th>
<th>Education and language/ literacy</th>
<th>Safety (including racism/discrimination)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elimination/reduction of in-person social support services and socialization opportunities due to physical distancing</td>
<td>Lack of educational support for students with special education or language needs during school closures</td>
<td>Increasing discrimination against certain racial/ethnic groups</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Limited access to technology to continue with online learning during shut down</td>
<td>Exacerbation of existing racial/ethnic tensions and economic disparities</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Rapid flow of information about COVID-19 may not be provided in appropriate languages or channels to meet needs of hard-to-reach populations</td>
<td>Physical distancing/isolation and economic stress may trigger domestic abuse</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Economic stress may increase rate of crime</td>
<td></td>
</tr>
</tbody>
</table>

State / local government
Measures can be taken across levers to support people and businesses at the local level

<table>
<thead>
<tr>
<th>Lever</th>
<th>Example specific measures</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>People</strong></td>
<td></td>
</tr>
<tr>
<td>Protect current employment</td>
<td>• Support continued employment through targeted wage subsidies</td>
</tr>
</tbody>
</table>
| Enable rapid returns to the workforce | • Reduce barriers to accessing work (e.g., loosen licensing requirements)  
• Create COVID-19 response job portals to connect the unemployed or underemployed with companies seeing spikes in demand |
| Support critical needs | • Ease critical expenses through residential loan forbearance measures or eviction freezes  
• Identify and communicate to beneficiaries of any stimulus funding measures to ensure appropriate enrollment |
| **Businesses** | | |
| Improve liquidity/cash flow | • Ease financial obligations, e.g., postpone/waive taxes or fees for SMBs or hardest hit sectors, commercial mortgage loan forbearance measures  
• Accelerate state’s payment of outstanding AP to state vendors  
• Facilitate process for SBA loans/grants, e.g., portal to support application prep |
| Invigorate demand | • Target affected sectors and SMBs with dedicated state purchasing/procurement programs  
• Shift attention to demand spikes and essential needs |
| Re-start/continue operations | • Support shift to remote operations, e.g., expanded WiFi coverage, targeted loans for remote work equipment |

## COVID-19 readiness dashboard structure for state/local governments

### Foundational public health
- Score: 23
- Domain performance metrics: Mortality, Hospitalized patients, Healthcare workers, Active cases
- Tactics: PPE/worker safety, Testing, Public outreach, Enforcement

### Societal compliance
- Score: 76
- Domain performance metrics: Compliance by high risk, medium risk, and low risk
- Tactics: Contact testing, Quarantines, Support

### Health system capacity
- Score: 54
- Domain performance metrics: Ventilators, Beds, Intensive care beds, Clinical workforce
- Tactics: Supplies (vents), Physical space, Clinical workforce, Direct intervention

### Industry safeguarding
- Score: 15
- Domain performance metrics: Ability to consume safely, Portion safeguarded of essential services, non-essential services, schools
- Tactics: Essential services, Non-essential sectors, Education, Standards

### Vulnerable populations
- Score: 25
- Domain performance metrics: Eviction rates, SNAP enrollment, Suicide rates, Depression, anxiety RXs
- Tactics: Social sector, Private sector, Federal programs, Monitoring

### Economic health
- Score: 32
- Domain performance metrics: Unemployment, Bankruptcies, Sales tax, New business formation
- Tactics: Federal programs, State programs, State benefits

### Composite index
- Score: 11

### Domain performance
- Epidemiological: Starting context, Rate of new cases, Immunity
- The science: Treatment, Vaccine
- Domain performance:
  - Public health
  - Societal compliance
  - Health system capacity
  - Industry safeguarding

---

Many uncertainties are causing lack of clarity on return planning for corporations

1. **Future of work**
   - Will COVID-19 driven changes (e.g., in remote work) accelerate other changes (e.g., greater percentage of jobs done through gig-style contracts) that affects current plans on hiring & talent management

2. **Workforce safety**
   - What leading indicators could precede a lifting of shelter at home provisions?
   - Will less impacted regions restart sooner than more impacted regions?
   - Will companies be liable if they return employees to work and they fall ill?
   - How much advance warning will federal, local, state governments give before shelter at home provisions are lifted?
   - Will there be restrictions mandated by the government at the time of a restart/return to work?
   - Are there any employee segments that would like current remote work arrangements to continue, and can still be productive?
   - What new norms need to be defined and followed to ensure no spread in our facilities?

3. **Strategic shift to ‘next normal’**
   - Will COVID-19 driven changes (in the market, consumers, competitive landscape, other) result in fundamental strategic shifts for the company soon after COVID-19, and will that drive the need for a new set of skills that are not currently assumed in the workforce plan?

4. **Financial impacts**
   - What will the extent of demand drawdown be?
   - What are the chances of an economic recession (in spite of bailout packages and other measures)?
   - What implications would a potential downturn have on the business (revenue hit, liquidity issues, other)
   - What do these implications mean for the workforce?
   - Will the bailout package (or post COVID reform measures) include provisions that affect the organization in a fundamental way?
A basic framework for return to work planning

</tbody>
</table>
Who to transition: Four categories of workforce for the immediate post-shelter-at-home environment

Maintain remote work, while increasing flexibility
- Focus on remote support, productivity, connectivity, health
- Shift contracts where needed & possible towards flexible arrangements

Define plan for staged return based on local context
- Identify milestones for starting a safe return to work process (e.g., local public health system readiness, government return to work guidelines)
- Develop detailed plan for return to work based on key considerations: virus spread, guidance from public health authorities, workforce readiness to return to work, legal liability

Return to work with increased work flexibility
- Define plan for return to work, including staggered shifts and slower ramp-ups
- Re-train to move to more flexible skill sets
- Shift contracts where needed & towards flexible arrangements

Transparency, reskilling, preserve company’s future
- Provide transparency into reality of situation facing company
- Re-train or seek opportunities to shift focus
- Other actions to preserve future of company
**When to transition**

Charting the path toward returning to work and planning for economic recovery

---

**What you have to believe before returning your workforce back to sustainable operations**

- Shelter at home provisions are removed

- Local public health situation indicates recovery

- Demand within region is starting to return (in case the region is a market)
When to transition: Leaders must monitor key milestones to chart path toward recovery

Businesses can anticipate return to work and plan for economic recovery by monitoring readiness indicators

**Example Return to work readiness milestones**

**Health system capacity**
- >5 ICU beds per 10,000 adults
- >45 hospital (Med/Sur) beds per 10,000 adults

**Case progression**
- Rate of new cases falls below <8%
- <.02% of the population is currently sick

**Testing and Tracing**
- Positive tests represent <20% of total tests administered
- Availability of rapid testing
- Contact tracing at scale infrastructure in place
- Progress toward 70% of population immune (via vaccine, recovery, or tested immunity)

**Example Economic recovery readiness milestones**

**Economic stimulus**
- Degree of distribution of government stimulus

**Social distancing behavior**
- Traffic congestion returns to within 30% of 2019

**Corporate confidence**
- Unemployment rate is going down
- Purchasing Managers Index is over 50

**Consumer confidence**
- Consumer Confidence Index rises from prior month
- Discretionary credit card increases for two weeks
- Retail foot-traffic returns to within 20% of pre-crisis
When to transition: An effective leading indicator dashboard can help determine timing of recovery

Indicators of recovery: Regions do not need to meet desired thresholds of all indicators to be “ready”

<table>

How to transition: “Return to workplace” should be executed with care

Sample employer interventions

**Healthy human interactions**
- Ensure employees and customers stay > 6 ft apart
- Sanitize high-contact surfaces
- Separate customers and employees from potentially ill individuals
- Ensure hygienic handling of items that come in contact with the broader population (e.g., materials handling)
- Mandate temperature checks upon entry

**Seamless business operations**
- Flexible sick leave so workers can stay home when ill
- Support function flexibility (e.g., backup supply chains, contractors)
- Manage absenteeism and enable remote work, rotating days/weeks
- Operate multiple locations without travel
- Structurally limit physical contact between employees (e.g., barriers between workstations)
- Improve building conditions and airflow (e.g., ventilation, no-touch bathrooms)
- Educate on good hygiene habits (e.g., handwashing, sanitizer)
- Routine and targeted deep cleaning (e.g., if an employee tests positive)
- Provide personal protective equipment where needed (e.g., facemasks, gloves)

1. Any steps on safety should be taken in accordance with CDC / local Department of Health guidelines

Source: CDC, OSHA
China example: Protocols specifically tailored by sector can also help lower transmission (1/2)
Examples of protocols in manufacturing sector in China

Factory worker safety
Staggered working shifts, arrival times and lunch breaks; temperature screening and sanitizers; physical distancing seating arrangements; worker space decontamination; required to issue personal protective equipment to all workers; wear masks at all times

Maximize worker availability
Cover costs for travel/relocation for dislocated workers returning to work (with 14-day quarantine for those returning from high risk provinces); flexible work hours; proactive assessment of worker health codes (green/yellow/red)

Inbound supply
Suppliers, manufacturers, and customers have shared resources proactively, given mutual dependence including PPE (masks, disinfectants), idle transportation asset, and personnel; manufacturers have simplified offerings to high running items, shifting focus to locally supplied SKUs, and key input suppliers are more closely tracked

Logistics
Change in operating model, including running multiple drivers per truck asset with staggered timings to fully utilize asset; segregation of drivers, transfer points, and rest/cleaning checkpoints; drivers wearing full protective equipment; ensure distribution center safety measures

Non-manufacturing function
Implemented work-from-home accommodations to roles that are able to; flexible work schedules and teleworking; staggered work times to ensure availability of research spaces while maintaining physical distancing

Large Electronic Manufacturer
A large electronics manufacturer has introduced frequent temperature testing and plans to give tens of thousands of coronavirus tests to workers along with an equally large number of chest x-rays. Workers with elevated temperature are immediately taken to a hospital, and those around them are closely watched.

Car manufacturer
After shutdown was lifted, a car manufacturing facility gradually resumed operations and has now returned to full activities. Among other measures, employees are also prohibited from sharing apartments and provided isolated accommodations instead.

Source: Interviews with plant managers in China on March 21-24, 2020
Singapore example: Protocols specifically tailored by sector can also help lower transmission (2/2)
Examples of protocols in food and restaurants businesses in Singapore

Pre-lockdown, food & restaurants across the country rolled out several health safety measures to prevent contagion

One restaurant moved out around 10% of tables to ensure adequate spacing, ensure 1m spacing between customers by placing 1m stickers at queue line, and collected customer contact details for contact tracing.

One restaurant spaced their touchscreen kiosks 1m apart with staff will disinfect the screens every 15-30 mins. They will have 1m floor markers along with safe distancing signages at various spots in stores. Staff are also required to wear masks and are prohibited from accepting personal cups.

Shopping malls and public venues continue to operate with crowd control and physical distancing measures

Crowd control measures in full force at malls, attractions and public venues, sealing entrances

Limit capacity and disperse groups of more than 10

Public areas implementing at least 1 metre physical distancing with seat markers

Malls limiting capacity of visitors with queue for entrance screening

physical distancing at public transportation stops

Source: Interviews with plant managers in China on March 21-24, 2020
Approach for effective return to sustainable operations for a corporation

**Goals**

- Define near-term roadmap to restore sustainable workplace operations
- In parallel, re-imagine the long-term workforce to align with new post-COVID strategic objectives

**Approach**

- Define post-COVID workforce impacts in 2020 time frame in different scenarios
- Segment employees into relevant categories
- Defined detailed plans for each segment
- Define longer-term scenarios, and portfolio of strategic actions over time
- Refresh future of org plan to include post-COVID ‘next normal’ thinking
- Define roadmap to connect & align near-term plan to longer-term goals
Nerve center

Managing across the 5Rs requires a new architecture based on a team-of-teams approach.
Many leaders are experiencing a big increase in COVID-19 issues...

- How do I protect my people?
- How do I ensure transparency with customers?
- How do I stabilize my supply chain?
- How do I ensure working capital?
...but there is a tsunami of ever-more-complex issues that lie ahead

- How do I protect my people?
- How do I ensure transparency with customers?
- How do I stabilize my supply chain?
- How do I ensure working capital?

COVID-19 initial issues

- We are in the middle of the biggest demand drawdown since WW2 – Do we have a plan to survive that puts everything on the table?

Economic recession

- Will we be in this situation for weeks or months?
- What will return to work really look like, and how can I do it without endangering my people?

Return to work

- This kind of sea-change, for this long a time, will mean that the world post COVID-19 could look very different than the world before it
- Do we know the big changes, and what it means?

A new normal
When facing such a tsunami, companies make four mistakes

**Inadequate Discovery**

Optimism bias, lack of adequate ‘sensing mechanisms’ (e.g., escalation failures), over-reliance on past patterns, risk rationalization

*Industrial manufacturer:* pushed out fix timelines for failed product more than 12 times. Top management optimism bias was called out multiple times by regulators, politicians and other observers

**Constrained Solution Design**

Many crises have a technical core, which needs new solutions to be invented (e.g., BP top hat) or imported anew into the sector/geography

*Energy company:* Many public failures to fix process safety issue before success. Challenge was that the fix needed new engineering innovation

**Slow or Bad Decision Quality**

Groupthink, political pressures, high-emotion situations; Unfamiliarity – pattern recognition-driven thinking fails; Desire to wait for more facts slows response

*Challenger disaster:* NASA engineers pressured Thiokol to change their ‘no-launch’ recommendation (Thiokol shifted their stance to satisfy their biggest customer) in spite of a well-understood technical failure on O-rings.

**Inadequate Delivery (Execution failure)**

Chaos during disruptions frequently translates to lack of accountability and direction, ‘operations addiction’ on the part of top management, leading to failures of execution

*Automotive manufacturer:* Was criticized for multiple aspects of recall activity (e.g., unclear terms and conditions, inadequate call center staffing, other challenges)
The central question

How can I increase my organization’s capacity and speed to respond decisively to today’s issues…

…while uncovering the truth about the future, and shoring up defenses to meet it?

Nerve centers are a specific organizational construct, meant for institutions that are facing existential, high-velocity disruptions, that are designed to address this question.
How Nerve Centers achieve this – “team of teams” made of 4 teams
Deliver, Decide, Discover, Design

Team 1 – Deliver
Execution team(s)

Team 2 – Decide
Integrated Operations team

Team 3 – Discover
Scenario Planning team

Team 4 – Design
Strategic Moves team

Deliver quickly & flawlessly on priorities provided by “Decide” team

Ensure “Deliver” goals are current & progress is occurring; decide whether to trigger a strategic move

Evaluate possible scenarios – near-term to long-term & derive implications; craft one planning scenario for other teams

Craft a portfolio of strategic actions with clear trigger points

Present focus
Plan Ahead
Nerve Center needs to evolve from present focus to include plan ahead teams

**Present focus**
- Employee protection
- Customer management
- Supply chain
- Cash

**Future focus – Plan ahead team**
- Clear, unbiased scenarios
- Portfolio of strategic actions (across Resilience)
- Detailed plan for Return
- New strategy for the ‘new normal’ - Reimagination & Reform
A plan ahead team can offer quick responses to rapidly changing circumstances using 5 frames

1. Get a realistic view of your starting position
2. Develop scenarios for multiple versions of your future
3. Establish your posture and broad direction of travel
4. Determine actions and strategic moves that are robust across scenarios
5. Set trigger points that drive your organization to act at right time

Please refer to this link to read the full article

Source: Getting ahead of the next stage of the coronavirus crisis, April 2020
Nerve Center design is based on military command principles

Core concept: Create an organization that can Observe, Orient, Decide and Act faster than the environment

John Boyd’s OODA loop

John Boyd was a Colonel in the U.S. Air Force, whose ideas on the art of war revolutionized U.S. military thinking, especially after the Vietnam War.

Boyd’s key concept: The OODA loop.

The key to victory is to be able to make appropriate decisions faster than the rate at which the environment evolves.
Market capitalization has declined across sectors, with significant variation to the extent of the decline.

Based on the partially effective scenario

<table>
<thead>
<tr>
<th>Industry</th>
<th>Avg. stock price change</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>Commercial</td>
<td>-40%</td>
<td>Preexisting industry conditions, challenges with airlines' balance sheet resilience, and high fixed costs cause near-term cash flow issues and long-term growth uncertainty. It may take years to recover from production and supply chain stoppages, due to critical vendors located in areas impacted by the virus and liquidity challenges especially amongst Tier 3 suppliers. Long order backlogs mitigate some concerns, especially on narrowbody aircraft, though widebody demand could be structurally impacted in the near-term.</td>
</tr>
<tr>
<td>Aerospace</td>
<td>-36%</td>
<td>Deep, immediate demand shock 5-6x greater than Sept 11: ~70-80% near-term demand erosion due to int’l travel bans &amp; quarantines now prevalent in 130+ nations. N. Hemisphere summer travel peak season deeply impacted since pandemic fears coincide with peak booking period. US govt is providing both grants and loans to the travel industry as part of a broader package; analysts estimate grants will last major carriers ~2-6 months. Recovery pace faster for domestic travel (~2-3 quarters); slower for long-haul and int’l travel (5+ quarters).</td>
</tr>
<tr>
<td>Air &amp; Travel</td>
<td>-34%</td>
<td>Oil price decline driven by both short-term demand impact and supply overhang from OPEC+ decision to increase production. Oversupply expected to remain in the market even after demand recovery, and post 2020, unless OPEC+ decides to cut production. Erosion of gas demand driven by reduced power and industrial activity, combined with historically high storage levels, puts downward pressure on overall gas price levels. Cash cost gas price economics expected in the next 1-2 years, with potential volatility in the 2023-2024 horizon.</td>
</tr>
<tr>
<td>Oil &amp; Gas</td>
<td>-22%</td>
<td>US insurers have been strongly affected, especially reinsurers and life &amp; health insurers. Reduced interest rates and investment performance impacting returns – esp. for longer-tail lines. Disruptions expected in new business and underwriting processes due to dependence on paper applications and medical underwriting. Lock-downs around the world forced insurers to extend grace period for renewing the policies from 15 to 30+ days that will lead to drop in premiums in 2020.</td>
</tr>
<tr>
<td>Automotive</td>
<td>-21%</td>
<td>Existing vulnerabilities (e.g., trade tensions, declining sales) amplified by acute decline in global demand. Mar. 26 Survey of US auto consumers indicates 70% of car buyers are deferring by ~6 mo. or no longer intending to purchase. ~15% of Chinese light vehicle volume loss in 2020 under current recovery trend, and ~25-30% in EU and US markets. Despite ongoing Chinese economic restart, where most Chinese factories open again with production ramping up, there is continued supply chain and production disruption as majority of EU and US OEMs have temporarily closed plants until mid-to-late April.</td>
</tr>

</tr>
</tbody>
</table>

**Early thoughts on evolution post-COVID**

**Convergence of remote work technologies, biosecurity issues, and sustainability concerns could structurally shift demand curves downward**

**Government intervention though a stimulus package, to ensure there is not a liquidity crisis, may have implications for industry structure as increasingly involved interventions may impact strategy and operations (e.g. equity stakes, conditions for support)**

**Given low oil price expectations for the short-term, operating costs may be reduced but could also impact aircraft leading market**

---

1. For capacity, load factor, and occupancy, YoY change of Sept 2001 | 2. For capacity, YoY change of Feb 2009, for airline load factor and hotel occupancy rate, YoY change of March 2009, for hotel stocks | 3. Based on latest capacity adjustment announced by AA/DL/UA | 4. Based on forecast from United Airlines

Source: USDOT T100, STR (Week of March 15-March 21), press search
Commercial Aerospace

Current Impact

The underlying drivers for commercial aircraft equipment and services is driven by airlines; Airlines have significantly reduced capacity and grounded fleets

1. Narrow body orders declined 21% and wide body orders declined 18% from 2017 – 19. Narrow body cancellations grew 4% and wide body cancellations grew 5% during the same period
2. Boeing reported 18 gross wide body orders in Feb. and 43 737 MAX (narrow body) cancellations. Airbus reported 287 total gross orders and 13 cancellations as of 3/15
3. Assumes 2020 YTD backlog = ‘19 backlog – ‘20 cancellations YTD (56 cancellations YTD from Boeing and Airbus)
4. 2020 backlog years figures assume 2020 deliveries remain at 2019 levels
5. Calculates backlog years assuming no dip in 2019 and 2020 deliveries (deliveries remain at 2018 levels)
6. Actual backlog is 14.6 years (backlog shown in chart assumes no dip to deliveries in 2019)

Medium-term expectations (through 2020)

19-20YTD commercial aircraft orders, backlog, backlog years & deliveries

Early thoughts on evolution post-COVID

Intrinsic demand for aircraft likely disappears in 2020

Airline balance sheet concerns will lead to restructuring of order books; cash conservation efforts at airlines constrain capital set aside for delivery payments

Low fuel price expectations for the short-term could extend life of older assets, but not into major heavy maintenance check cycles

Government intervention may mitiagte near-term risk of employee furloughs and supply chain insolvencies

Source: Cirium
Oil & Gas

Current Impact

LNG
COVID-19 has affected regions that account for over 80% of global LNG demand; Chinese LNG imports (17% of global imports) fell by 7% yoy Jan-Mar 2020; buyers have triggered Force Majeure, cancelled cargoes and engaged in contract renegotiations.

Oil
Demand decline due to COVID-19 (5.4-11.4mbd for 2020 under A3 & A1 scenarios) and OPEC+ deal failure pushed oil prices under $30/ bbl.

Short term demand destruction (potential to be 20mbd for April) could lead to storage constraints and regional prices to fall even sharper, while US drilling activity has already been cut (90+ fewer rigs running, -10+% in the last 2 weeks).

Medium-term expectations (through 2020)

Based on our global COVID-19 scenarios, LNG demand will decline by 3-10% compared with pre-COVID-19 case to 320-350mtpa (compared with 380mtpa supply capacity). Near-term LNG prices will be driven by cash cost economics (with gas prices in Europe and Asia at $1-2/mmbtu premium to US gas prices).

Global oil demand substantially reduced due to restrictions in road transport and capacity declines in airlines across the world through Q3 2020.

Low short-term oil prices are expected to continue for most of 2020 unless we see a large supply cut. Production shut-ins could start to materialize in the short term and help to balance the market. Potential OPEC+ deal could be reached in the next few weeks.

Early thoughts on evolution post-COVID

Following the sharp oversupply, volatility in the market in the 2023-2025 horizon with sporadic tightness, followed by a period of oversupply (given 80+mtpa LNG capacity taking FID in the last 2 years).

Short term price dynamics that do not involve an OPEC+ intervention increase the likelihood of having an under-investment scenario play out in the medium-term, resulting in a new price up-cycle.
Appendix
Leaders need to think and act across 5 horizons

1. **Resolve**
   Address the immediate challenges that COVID-19 represents to the institution’s workforce, customers, technology, and business partners.

2. **Resilience**
   Address near-term cash management challenges, and broader resiliency issues during virus-related shutdowns and economic knock-on effects.

3. **Return**
   Create a detailed plan to return the business back to scale quickly, as the virus evolves and knock on effects become clearer.

4. **Reimagination**
   Re-imagine the “next normal”—what a discontinuous shift looks like, and implications for how the institution should reinvent.

5. **Reform**
   Be clear about how the regulatory and competitive environment in your industry may shift.

**Nerve center**
Managing across the 5Rs requires a new architecture based on a team-of-teams approach.
Resolve

Address the immediate social and mental challenges that COVID-19 represents to the institution’s workforce, customers, and business partners, and take basic steps to protect liquidity.
## Resolve: Making hard decisions on immediate challenges

Resolve employee, customer, supply chain, immediate liquidity, and technology concerns

<table>
<thead>
<tr>
<th>Employees</th>
<th>Customers</th>
<th>Supply chain</th>
</tr>
</thead>
<tbody>
<tr>
<td>How do we manage safety for the returning workforce (e.g. in research labs, production facilities)? How do we offboard in socially responsible ways? Is there potential for employer controlled testing for employees?</td>
<td>How do I stay in touch with customers and remain relevant to them when they don’t desire or need my services? How do I inspire loyalty in my customers?</td>
<td>How do we create transparency across the supply chain and customer demand?</td>
</tr>
</tbody>
</table>

### Example actions

**Employees**
- Implement physical mechanisms to reduce transmission (e.g., cleaning, staggering shifts)
- Invest in facility and employee level equipment and supplies (e.g., cleaning)
- Over-communicate with all employees on current and future plans to keep employees safe
- Reskill and redeploy instead of offboarding employees where possible
- Explore creative employment solutions (e.g., loan talent to other orgs, divest business line)
- Leverage and educate employees on applicable government support and benefits programs
- Screen employees, visitors and clients based on temperature checks, travel history and self-reported or visible symptoms
- Offer testing or covering the cost of testing motivated by symptoms, contact tracing, travel history, etc.

**Customers**
- Demonstrate flexibility to customers during times of hardship
  - **Major airlines** are offering change/cancel flexibility. Most are also allowing passengers to reseat themselves on the plane in accordance with physical distancing
  - Going out of their way to keep customers and employees safe regardless of impact to balance sheet
    - **Hotels in Europe and Asia** are providing “quarantine” service (e.g., room reservation with nobody next door)
    - **Grocery stores** are limiting purchases of essential items, limiting the number of customers in store, and temporary closing locations for deep cleans, among other safety measures
- Demonstrate commitment to healthcare
  - **Coffeehouse chains, car rentals and shoe companies** are offering free products and services to healthcare workers
  - Furniture distribution centers are being repurposed as testing centers for NHS workers
- Other examples of companies being ‘agile’ in attracting customers
  - **Rideshare companies** are pivoting to delivery
  - **Local restaurants and restaurant chains** are offering free and contact-free food deliveries

**Supply chain**
- Monitor supply disruption risks by mapping supplier and sub-tier connectivity to COVID-19 associated shocks
- Monitor extending lead times to gauge performance and capacity against supplier promises
- Map inventory end to end across the supply chain to identify current days of inventory and to predict impacts of disruptions
- Validate realistic final demand with customers and ensure customers aren’t exhibiting bad behaviors
- Predict production capacity, logistics capacity, and availability of supply
- Establish four control towers to guide demand/capacity/S&OP decisions and manage supply chain risks working with the Corporate Nerve Center

### Emerging concerns

- How do I stay in touch with customers and remain relevant to them when they don’t desire or need my services? How do I inspire loyalty in my customers?
Employees: Companies should invest and prioritize to protect the safety and morale of employees unable to work from home

Non-WFH employees face a unique set of concerns…

However, best-in-class companies are finding new ways to address employee concerns while protecting them from unnecessary risk:

**Perceived unfairness:** having to continue going into work while other employees stay home with their families

**Safety risk:** significant increase in potential exposure to disease (e.g., commute, customers and other employees in the workplace)

**Perceived value:** Don’t feel as valued by company and that their safety is not prioritized

**Fear of illness:** In addition to clinical harm (e.g., fever, body aches), fear of being isolated from their families if ill

---

**Major U.S. retailer**

Flexible work policies including relaxing absenteeism policy (i.e., allowing workers to stay home for personal reasons)

**Major U.S. retailer**

Minimizing contact between deliverers and customers (e.g., cashless payment only, leaving bags at door, all employees provided masks and gloves)

**Leading UK retailer**

Extending benefits to include back-up child and elderly care (up to 25 days) and mental health benefits (e.g., teletherapy sessions)

**Leading Italian banks**

Limiting operating hours for all branches with access granted only upon pre-arranged appointment to minimize contact and increase sanitization time

**Global coffee shop retailer**

Offering 14 days of “catastrophe pay” for U.S. workers exposed to COVID-19, over 60, pregnant, or have underlying health issues (in addition to existing sick pay)

---

Customers: Set up agile Rapid Revenue Response squads to drive progress during the pandemic for B2B & B2C companies

**Phase 1: Reset and calibrate**

- Understand which trends and pockets are growing by analyzing customer insights, sentiment, and demand signals
- Diligence all your current commercial activities - from sales to communications to expenses
- Align on value proposition and what truly aligns to the immediate needs of your customers or prospects

**Phase 2: Activate key levers**

Prioritize B2B and B2C commercial levers to pursue:

- **Sales and channel**: Identify realistic opportunities and high growth channels, build remote selling capabilities, invest in customer outreach and customer service preparedness
- **Pricing/Promo**: reset pricing / discounts to meet customers’ evolving near-term needs
- **Marketing**: Reinvest marketing spend across opportunities and high-traffic channels that will drive highest ROI growth; ensure tone is sensitive, relevant and authentic
- **Product / CX**: Adjust offerings/SKUs to meet customers’ demand signals; establish genuine connection with customer and employee needs
- **Commercial Cost/Cash**: Manage discretionary spend, both working and non-working, re-allocating rapidly

**Phase 3: Read and respond**

- Evaluate performance of tactics activated, likely re-setting ROI measurement approach
- Continually optimize tactics that work
- Align on next wave of commercial tactics by integrating new customer insights and market demand signals

Supply chain: Actions to consider in response to COVID-19

Immediate (1-4 weeks)

Understand exposure
- Estimate how demand changes across customers
  - Leverage direct communication channels with direct customer when determining demand signals
  - Use market insights/external databases to estimate demand for customer's customers
  - Task S&OP team to build 3-6 plans under a range of demand scenarios month to determine required supply

Determine how supply will be impacted and understand key risks
- Work with tier 1 suppliers to understand supply chain risks throughout all tiers; complement with outside-in analytics where tier 1s do not have transparency
- Account for all inventory (e.g., in transit, in warehouses, in spares stock) and calculate inventory buffer
- Conduct scenario planning to understand how inventory buffer changes in various disease scenarios
- Run supply chain "stress tests" vs. supplier balance sheets to understand when supply issues will start to stress financial or liquidity issues
- Assess whether border closures or restrictions will disrupt supply chain

Take action to address anticipated shortages
- Evaluate any option for new supply sources
  - Identify alternative sources if supplies are affected and accelerate exploration of additional options
  - Determine possible geographies and supplier shortlists in case alternate supply is required
  - Identify ways to expedite qualification process and/or insure for components where supply is threatened
  - Contact authorities in areas where customs clearance could become a challenge
  - Determine what portion of supply can be swung to another site if shutdown persists based on sourcing strategy (single, dual, multi)

Revisit production plans as required based on:
- Expected supply shortages
- Products in most consumer need, with highest margin, or highest opportunity cost / penalty production

Understand robustness of current supply chain logistics
- Estimate available logistics capacity; pre-book air freight\(^1\) / rail capacity as required by current exposure
- Collaborate with all parties to jointly leverage freight capacity, new/alternate supply sources, etc.

Other actions
- Work for extending lead times to gauge performance and capacity against supplier promises
- Use after sales stock as bridge to keep production running if needed

Protect employees and suppliers
- Work with supplier to source personal protective equipment for production lines operating in affected markets (e.g., glasses, gloves and masks)
- Engage with crisis communication teams to clearly communicate to employees on infection risk concerns (e.g., disseminate facts about virus from credible source) and work from home options
- Consider short-term stabilization for suppliers (e.g., low-interest loan) to allow for a faster restart

\(^1\)Given costs, airfreight might not be an option for many industries; availability is already limited

Mid-term (4-12 weeks)

Continuous improvement of material supply stability
- Identify alternative options based on anticipated demand
  - Evaluate alternative sourcing options for all the materials impacted – availability of suppliers, additional cost due to logistics, tariffs, estimate of price increase of the components
  - Enhance the demand verification process to correct inflated demand to mitigate the bullwhip effect

Provide support for smaller suppliers
- Provide continuous support for mid-small size tier 2-3 suppliers in financial troubles
- Assess regional risks for current and backup suppliers

Kick off designing resilient supply chain for the future
- Codify & digitize processes and tools
  - Codify the processes and tools created during the crisis management as formal documentation
  - Digitalize process and tools to integrate demand, supply, and capacity planning

Develop systems to “bullet proof” supply chain
- Convert war room into a reliable supply chain risk management process
- Ensure stakeholders address vulnerabilities across all parts of the supply chain
- Trigger the new supply network design for resilience

Build collaborative relationship w/ ext. partners
- Work with government to ensure industry can ramp up as quickly as possible as crisis resolves
- Actively engage investors and other stakeholders to build transparency on the situation and get help
2

Resilience

Address near-term cash management challenges, and broader resiliency issues
6 steps toward end to end resilience plan

01 Identify and prioritize key risks
Identify and prioritize key macro, sector and company idiosyncratic risks based on exposure and impact

02 Develop tailored scenarios
Develop company specific scenarios based on the range of outcomes of the highest priority risks

03 Conduct stress testing of financials
Stress test the P&L, Balance Sheet, Statement of Cash Flows to assess and frame the potential gaps for planning

04 Establish portfolio of interventions
Identify an end to end portfolio of interventions and trigger points

05 Set up a cash management dashboard
Improve cash transparency and implement tighter cash controls to mitigate downside scenarios

06 Build the resilience dashboard
Build the dashboard of key leading indicators to monitor that can be dynamically updated
1&2: Efforts require continuous re-evaluation of financial and market forecasts and corresponding actions

1. Identify key risks

- Understand the impact of key macroeconomic variables (e.g., GDP, unemployment rate) on performance of your PnL (e.g., revenue and cost)
- Impacted PnL variables could include:
  - Volume: consumer demand correlated with GDP
  - Cost: Commodity price evolution (e.g., oil and gas, food index) correlates with COGS
  - Price: housing prices and inflation correlate with price customers are willing to pay
- Refine a final list of no more than ~20 macroeconomic variables with quantified impact to key PnL items

2. Develop tailored scenarios

- Develop scenario narratives for Baseline and ~2-3 adverse scenarios, with overlay for duration and magnitude of Covid-19 near term shock
- Contextualize scenarios with assumptions on macroeconomic variables (e.g., worst-case GDP declines 20%)
- For each scenario, link macroeconomic projections back to PnL (e.g., best-case scenario includes 10% drop in demand, 20% drop in price, and 30% drop in COGS)
- Ensure scenarios capture strategic, financial and operational risks with consideration of the 2nd order impacts

Key activities

- Identify key risks
  - Understand the impact of key macroeconomic variables (e.g., GDP, unemployment rate) on performance of your PnL (e.g., revenue and cost)
  - Impacted PnL variables could include:
    - Volume: consumer demand correlated with GDP
    - Cost: Commodity price evolution (e.g., oil and gas, food index) correlates with COGS
    - Price: housing prices and inflation correlate with price customers are willing to pay
  - Refine a final list of no more than ~20 macroeconomic variables with quantified impact to key PnL items
- Develop tailored scenarios
  - Develop scenario narratives for Baseline and ~2-3 adverse scenarios, with overlay for duration and magnitude of Covid-19 near term shock
  - Contextualize scenarios with assumptions on macroeconomic variables (e.g., worst-case GDP declines 20%)
  - For each scenario, link macroeconomic projections back to PnL (e.g., best-case scenario includes 10% drop in demand, 20% drop in price, and 30% drop in COGS)
  - Ensure scenarios capture strategic, financial and operational risks with consideration of the 2nd order impacts

3&4: Efforts require continuous re-evaluation of financial and market forecasts and corresponding actions

3. Conduct stress testing of financials

**Key activities**

- For each scenario,
  - assess impact on the financial statements (P&L, Balance Sheet and Cash Flows)
  - assess gap relative to Baseline
- Run simulations at Corporate level to assess range of outcomes to assess impact on credit quality, cash and liquidity
- Run ‘reverse stress-tests’ to determine conditions for credit/liquidity crunch

**Sample output**

- Enterprise value (U.S. $ Millions)
- EBITDA (Percent of baseline forecast)
- Cash flow (U.S. $ Millions)

4. Establish portfolio of interventions

**Key activities**

- Prioritize critical areas of exposure and areas of lower/risk uncertainty
- Define & size portfolio of potential interventions (across operations, supply chain, capital, targeted M&A and divestitures and customer engagement)
- Launch quick wins on immediate stabilization (supply and demand-side) related to Covid-19
- Identify which are “no regrets” vs. trigger based and get pre-approval for higher risk moves, with clear agreement on conditions for activation
